# Aluspray®

NON ANTIBIOTIC | EASY TO USE | WEATHER RESISTANT | BREATHABLE

**vetoquinol**  
ACHIEVE MORE TOGETHER

## ALUSPRAY FORMS AN ALUMINIUM POWDER BARRIER FOR WOUNDS AND SENSITIVE SKIN

The fine mist propelled means Aluspray completely covers the wound and can be applied without damaging the wound tissue.

Aluspray contains a proprietary carrier that helps the protective formula to adhere to the skin, so it stays where it's needed.

Aluspray allows the wound to oxygenate [breathe] which is essential for optimal wound healing.

## ALUSPRAY IS IDEAL FOR HORSES AND OTHER ANIMALS KEPT OUTDOORS

Aluspray is easily applied and won't burn or blister sensitive skin.

Aluspray can be used as a barrier during risk periods e.g. mud fever and increased sensitivity to sunlight.

## A SPRAY THAT IS WEATHER RESISTANT

### WITH ALUSPRAY YOU'RE IN CONTROL

Unlike sprays with colour dye, Aluspray washes off easily with warm soapy water for inspecting the wound or for when the animal is able to compete/show.

## ALUSPRAY FORMS A PROTECTIVE BARRIER

- Against moisture
- Against micro-organisms e.g. bacteria and fungi including *Dermatophilus congolensis*, the causative agent of Mud Fever
- Against dirt, flies and other insects
- For teat ends in dry cows only. It should not be used to cover teat injuries in lactating animals producing milk for human consumption
- Shields sensitive skin from diarrhoea
- Post castration
- Post dehorning

## ALUSPRAY IS EASY-TO-USE

The can design means it can be sprayed quietly, upside down and with accuracy to easily reach difficult areas.

There is no antibiotic in Aluspray, thus overcoming any concerns over antibiotic residues in animals intended for food consumption.

**AVAILABLE FROM  
YOUR LOCAL SUPPLIER**

# Aluspray®

Aluspray can be applied at any angle with its even coverage forming an aluminium wound barrier.
